## Using Chatbots in the Classroom

---

This year, I've had the chance to work with educators across the country to share strategies they can use to save time this school year. In addition to this list of 25 ChatGPT prompts for math teachers, you can find my free downloadable ebook with 60+ more to explore. It includes a handful of favorite chatbot prompts that educators can customize for their own learning environment.

Chatbot technology has changed the way we think about tackling big and small tasks throughout the school day. You can think of chatbots like ChatGPT, Bard, or Claude as an "AI Assistant" to delegate tasks and save you time. But in order to use these spaces, you need a prompt that connects to your goals for the school year. Use the list above as inspiration, and share your favorites with your colleagues so they can try them, too. And if you want to share a favorite prompt on social media, tag me on Instagram, Threads, or Twitter (X) to let me know your favorite!
