Iron Chef EduProtocol

Description
- Iron Chef, modeled after the Iron Chef Cooking shows, is a student-centered, gamified jigsaw (with accountability) that is used to cover content and connect to standards.

- Students read, synthesize and create, and present to their peers.

- It's fun, it's fast, and it's a great way to move content into a student-centered format.

- It replaces lecture and note taking.

Academic Goals
- Learn content using a semi-student-guided model

- Work in teams

- Practice presentation skills

Key ideas
- Break students into groups (3 to 5).

- Students access shared slide deck(s) - Either one deck per group or one deck for the entire class that is divided for each group.

- Each student edits one of the slides for their group.

- Alternatively the group could collaboratively edit one slide for their group.

- Students access the provided resources for their topic (links, articles, text, video, etc.)

- Students add a few facts (3-5) for their topic, one picture, and whatever the "secret ingredient" asks for.

- Time is kept short at 10 minutes maximum.

- Each team presents their slides in a minute or two.
