

Tutorial: Create Stories with DALL E-3

1. **Requesting Pictures:** Start by asking for 8 pictures to match the story. It's important that all pictures have a similar style, especially in the characters, backgrounds, and even the speech bubbles.
2. **Review and Suggest:** Once the initial sketches arrive, take a good look. If a character doesn't seem right, they provide clear descriptions to better capture the character's appearance.
3. **Double-Checking:** Every sketch is then reviewed a second time to ensure nothing is missing or overlooked. Double-checking ensures that everything aligns with the vision.
4. **Generating Full Images:** When satisfied with the sketches, proceed to turn them into colorful, full images.
5. **Feedback and Adjustments:** Not every image might turn out perfect the first time. If something seems off, they pinpoint the problem and ask for revisions or adjustments.
6. **Adding Titles:** To give each image a finishing touch, they place titles on top. While another tool might be used for this, ChatGPT assists in brainstorming the perfect wording for these titles.
